AS 70

Extraction of scraps and residuals of packing or textile materials

KEEP CLEAN AND EFFICIENT YOUR PACKAGING LINE

Three-phase industrial vacuum cleaner for recovery of plastic and textile scraps

The AS 70 three-phase industrial vac is the most powerful and capable among Delfin's industrial vacuums for scraps.

This vacuum cleaner for plastic and textile waste is in fact equipped with a 5.5-kw turbine, capable of effectively collecting all the scraps created on packaging machines and lines. Thanks to the large container and the suction from the bottom, the vacuum cleaner can collect 210 lt of compacted material, which can be easily removed by simply taking out the filter bag.

INFINITE POSSIBILITIES OF CUSTOMIZATION

As every other Delfin vacuum cleaner, even the AS 70 is available in painted or stainless steel, with ATEX certification or special filters.

VACUUM CLEANER IDEAL FOR PACKAGING LINES

The vacuum AS70 is designed to work on packaging lines, even 24/7, without the need for maintenance on the engine. Thanks to its compact size it can be linked directly on the packing machine, while there is the possibility to integrate it on packaging lines.
